FORCE STRIKE BAR FORMATION STRATEGY

Bullish and Bearish Force Strike (FS) Strategy

FS is a price action fractal that demonstrate bear or bull trap by itself. Occurrence of this price action structure at the **common** simple moving averages indicates a shake out of short-term/swing traders by MM. Usage of this price action structure at key levels (LP) gives us clues on whether SL is being triggered and false breaks that results in bear or bull traps created by the MM.

Traders can take on standalone price action trades on **bullish FS** when there is **uptrend** retracement test of the 20/50SMA.

Traders can take on standalone price action trades on **bearish FS** when there is **downtrend** retracement test of the 20/50SMA.

Traders can take on standalone price action trades on **bullish FS** when there is force bottom scenario.

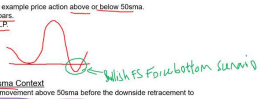

Traders can take on standalone price action trades on **bearish FS** when there is force top scenario.

Do refer to Entries and Exits chapter for detailed trade execution technique.

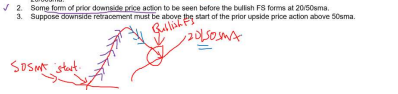

FORCE STRIKE BAR FORMATION STRATEGY

Bullish Force Strike (FS) Context to trade

Force Bottom Scenario Context
1. Can occur anywhere in the chart, example price action above or below 50sma.
2. Force bottom occurs with max 6 bars.
3. Bullish EXE to close at or above LP.

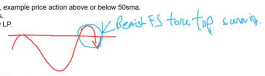

Uptrend Retracement test 20/50sma Context
1. Requires prior clear upside price movement above 50sma before the downside retracement to 20/50sma.
2. Some form of prior downside price action to be seen before the bullish FS forms at 20/50sma.
3. Suppose downside retracement must be above the start of the prior upside price action above 50sma.

FORCE STRIKE BAR FORMATION STRATEGY

Bearish Force Strike (FS) Context to trade

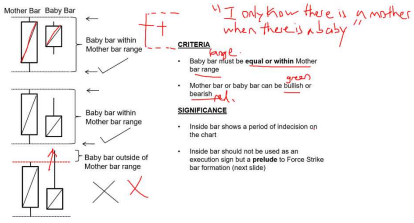

Force Top Scenario Context
1. Can occur anywhere in the chart, example price action above or below 50sma.
2. Force top occurs with max 6 bars.
3. Bearish EXE to close at or below LP.

Downtrend Retracement test 20/50sma Context
1. Requires prior clear downside price movement below 50sma before the upside retracement to 20/50sma.
2. Some form of prior upside price action to be seen before the bearish FS forms at 20/50sma.
3. Suppose upside retracement must be below the start of the prior upside price action above 50sma.

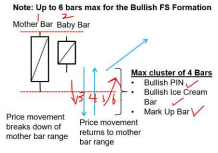

FORCE STRIKE BAR FORMATION STRATEGY

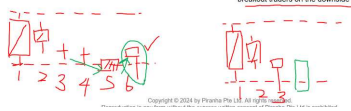

FORCE STRIKE BAR FORMATION STRATEGY

Note: Up to 6 bars max for the Bullish FS Formation

CRITERIA
- Satisfy Inside bar formation criteria
- Price movement to **break below** Mother Bar **Low** and **returns** within Mother Bar range.
- Bullish FS formation must be used in the correct context (force bottom scenario and/or clear uptrend retracement test 20/50sma)

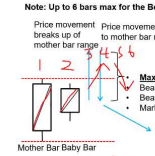

SIGNIFICANCE
- After a period of Inside bar indecision, MM cause a **false break** below Mother Bar low which trap breakout traders on the downside - Bullish

Copyright © 2024 by Piranha Pte Ltd. All rights reserved.

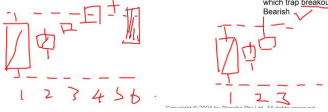

FORCE STRIKE BAR FORMATION STRATEGY

Note: Up to 6 bars max for the Bearish FS Formation

CRITERIA
- Satisfy Inside bar formation criteria
- Price movement to **break above** Mother Bar **High** and **returns** within Mother Bar range.
- Bearish FS formation must be used in the correct context (force top scenario and/or clear downtrend retracement test 20/50sma)

SIGNIFICANCE
- After a period of Inside bar indecision, MM cause a **false break** above Mother Bar high which trap breakout traders on the upside - Bearish

UPSIDE & DOWNSIDE CONTINUATION 1

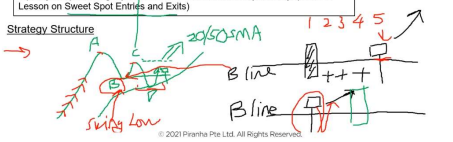

1.) Concept of Uptrend Retracement (Bullish) – UC1

UC1 (Upside Continuation 1)
Characteristic
1.) No flush up bar seen within 3 preceding bars leading to point A
2.) Clear uptrend price movement above 50 SMA (Positive flow)

Entry Rules
1.) Bullish EXE to **close at or above B line (LP)** within **5 bars.**
2.) UC1 structure forms **near or test 20/50 SMA**
3.) Bullish EXE **below point C** upon formation.

Exit Rules
1.) Project upside target price for **desired risk reward** upon entry. (Refer to Lesson on Sweet Spot Entries and Exits)

Strategy Structure

© 2021 Piranha Pte Ltd. All Rights Reserved.

UPSIDE & DOWNSIDE CONTINUATION 1

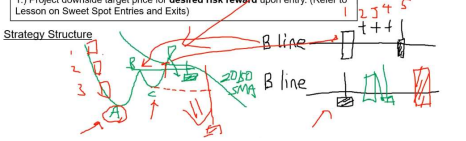

2.) Concept of Downtrend Retracement (Bearish) – DC1

DC1 (Downside Continuation 1)
Characteristic
1.) No flush down bar seen within 3 preceding bars leading to point A
2.) Clear downtrend price movement below 50 SMA (Negative flow)

Entry Rules
1.) Bearish EXE to **close at or below B line (LP)** within **5 bars.**
2.) DC1 structure forms **near or test 20/50 SMA**
3.) Bearish EXE **above point C** upon formation.

Exit Rules
1.) Project downside target price for **desired risk reward** upon entry. (Refer to Lesson on Sweet Spot Entries and Exits)

Strategy Structure

UPSIDE & DOWNSIDE CONTINUATION 2

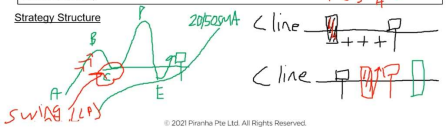

1.) Concept of Uptrend Retracement (Bullish) – UC2

UC2 (Upside Continuation 2)
Characteristic
1.) No flush up bar seen within 3 preceding bars leading to point B
2.) Clear uptrend price movement above 50 SMA (Positive flow)

Entry Rules
1.) Bullish EXE to **close at or above C line (LP)** within **5 bars.**
2.) UC2 structure forms **near or test 20/50 SMA.**
3.) Bullish EXE **below point D** upon formation.

Exit Rules
1.) Project upside target price for **desired risk reward** upon entry. (Refer to Lesson on Sweet Spot Entries and Exits)

Strategy Structure

UPSIDE & DOWNSIDE CONTINUATION 2

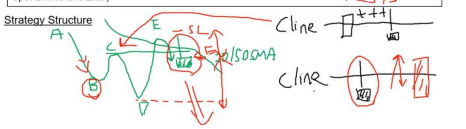

2.) Concept of Downtrend Retracement (Bearish) – DC2

DC2 (Downside Continuation 2)
Characteristic
1.) No flush down bar seen within 3 preceding bars leading to point B
2.) Clear downtrend price movement below 50 SMA (Negative flow)

Entry Rules
1.) Bearish EXE to **close at or below C line (LP)** within **5 bars.**
2.) DC2 structure forms **near or test 20/50 SMA.**
3.) Bearish EXE **above point D** upon formation.

Exit Rules
1.) Project downside target price for **desired risk reward** upon entry. (Refer to Lesson on Sweet Spot Entries and Exits)

Strategy Structure

UPSIDE REVERSAL 1 – UR1 DISTRIBUTION FORMATION

MARKETS TURN OR REVERSE IN 2 FORMS (Early Distribution Mode)

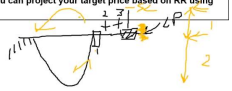

1.) Concept of Upside Reversal 1 – UR1

UR1 (Upside Reversal 1)

Characteristic
1.) Sideways price action movement.

Entry Rules
1.) Final price movement as _____ majority flush_____to force LP
2.) Bearish EXE to ____close at or below_____LP within _____4_____bars.

Exit Rules
1.) Project downside target price for **desired risk reward** upon **EXE signal (Recall, once you have your short entry within sweet spot and SL placement, you can project your target price based on RR using XSPY Excel sheet)**

Note: Requires Majority Flush Up

DOWNSIDE REVERSAL 1 – DR1 ACCUMULATION FORMAT

MARKETS TURN OR REVERSE IN 2 FORMS (Early Accumulation Mode)

2.) Concept of Downside Reversal 1 – DR1

DR1 (Downside Reversal 1)

Characteristic
1.) Sideways price action movement.

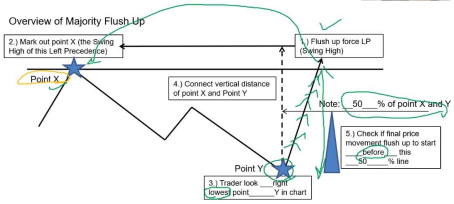

Entry Rules
1.) Final price movement as _____majority flush_____to force LP
2.) EXE to _____close at or above_____LP within _____4_____ bars.

Exit Rules
1.) Project upside target price for **desired risk reward** upon **EXE signal (Recall, once you have your Long entry within sweet spot and SL placement, you can project your target price based on RR using XSPY Excel sheet)**

Note: Requires Majority Flush Down

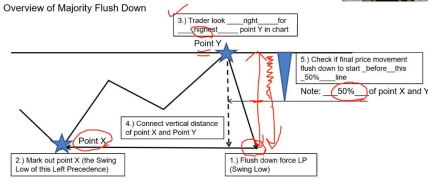

UPSIDE REVERSAL 1 – UR1 DISTRIBUTION FORMATION

Overview of Majority Flush Up

DOWNSIDE REVERSAL 1 – DR1 ACCUMULATION FORMAT

Overview of Majority Flush Down

UPSIDE & DOWNSIDE REVERSAL 2

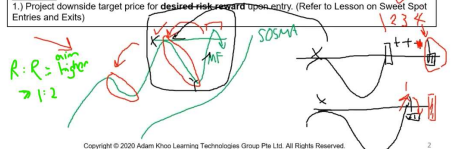

1.) Concept of Double TOP Reversal 2 – UR2

UR2 (Upside Reversal 2)

Characteristic
1.) Price movement in **up flow (uptrend above 50 sma)**

Entry Rules
1.) **Sign of bigger retracement** in price action. (compared to smaller prior price retracement)
2.) Final price movement as **majority flush** to force LP
3.) Bearish EXE to form **within 4 bars** and **close at or below** LP (Swing High)

Exit Rules
1.) Project downside target price for **desired risk reward** upon entry. (Refer to Lesson on Sweet Spot Entries and Exits)

UPSIDE & DOWNSIDE REVERSAL 2

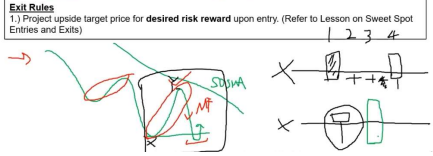

2.) Concept of Double BOTTOM Reversal 2 – DR2

DR2 (Downside Reversal 2)

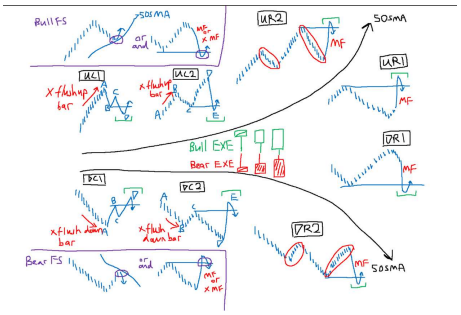

Characteristic
1.) Price movement in **down flow (downtrend below 50 sma)**

Entry Rules
1.) **Sign of bigger retracement** in price action. (compared to smaller prior price retracement)
2.) Final price movement as **majority flush** to force LP
3.) Bullish EXE to form **within 4 bars** and **close at or above** LP (Swing High)

Exit Rules
1.) Project upside target price for **desired risk reward** upon entry. (Refer to Lesson on Sweet Spot Entries and Exits)

Price Action Manipulation (PAM) L2 Strategy Quick Reference Sheet

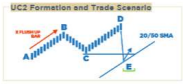

Market Accumulation & Distribution Rotation Model

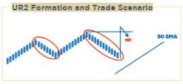

- ✓ Stock market always go up in the long run
- ✓ Crisis will come and we must be prepared to go in on fundamentally strong stocks when weekly DR1 occurs after crash (>20% from ATH)
- ✓ Market exist in 4 different states and we use different price action structures to trade accordingly

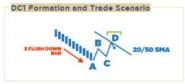

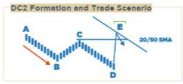

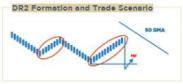

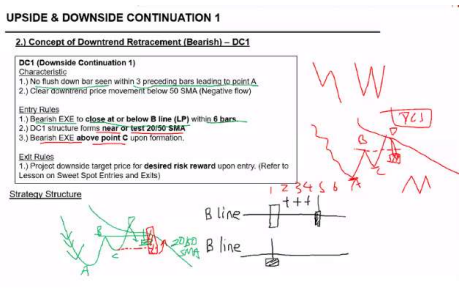

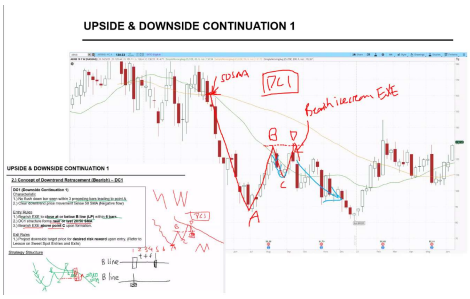

UPSIDE & DOWNSIDE CONTINUATION 1

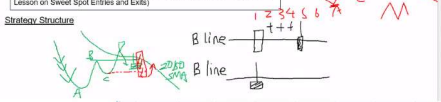

2.) Concept of Downtrend Retracement (Bearish) – DC1

DC1 (Downside Continuation 1)
Characteristic
1.) No flush down bar seen within 3 preceding bars leading to point A
2.) Clear downtrend price movement below 50 SMA (Negative flow)

Entry Rules
1.) Bearish EXE to **close at or below B line (LP)** within **6 bars.**
2.) DC1 structure forms **near or test 20/50 SMA**
3.) Bearish EXE **above point C** upon formation.

Exit Rules
1.) Project downside target price for **desired risk reward** upon entry. (Refer to Lesson on Sweet Spot Entries and Exits)

PAM INSIDE BAR BREAK (IBB) STRATEGY

Background
PAM Inside Bar Break (IBB) is an optional strategy for trading upside/downside straight line continuation of price action. There is no elements of manipulation as this strategy does not require force top/bottom scenario. Hence, there is no need to check for presence of LP levels. We will discuss the criteria's in the following slides.

Trader need to be familiar with PAM's **3 main EXE** and **inside bar formation**.

Common FAQ for IBB structure

1. Which time frame is suitable for IBB?

Weekly Chart

2. How is IBB different from force strike formation?

For IBB we are trading the break of mother bar high fractal while force strike is a false break of mother bar high. IBB looks similar to force strike formation, however their application is different.

Note: Force strike bar strategy is covered in force strike continuation and reversal lessons.

3. How do we know if upside IBB will turn into bearish force strike at key LP level?

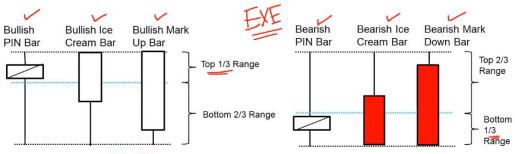

Such scenario may happens when inside bar occurs at LP levels. If we are trading a valid upside IBB, we will still go long even if there is presence of LP. We do not need to reference LP levels when trading IBB.

UNDERSTANDING PRICE ACTION BAR FORMATION

SUMMARY OF THE 3 STANDARD BARS

Flush up bar is **visually at least 1.5 times normal bar range** and must be **visually "outstanding"**. A guide is that when in doubt, usually it is not outstanding and most likely still considered mark up bar. A flush up bar is bearish to a trader as opposed to mark up bar which is bullish to a trader.

Flush down bar is **visually at least 1.5 times normal bar range** and must be **visually "outstanding"**. A guide is that when in doubt, usually it is not outstanding and most likely still considered mark down bar. A flush down bar is bullish to a trader as opposed to mark down bar which is bearish to a trader.

CRITERIA

- Baby bar must be **equal or within** Mother bar range
- Mother bar or baby bar can be bullish or bearish

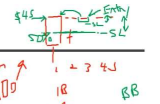

SIGNIFICANCE

- Inside bar shows a period of indecision on the chart
- Inside bar should not be used as an execution sign but a **prelude** to Force Strike bar formation (next slide)

UPSIDE INSIDE BAR BREAK (IBB) FORMATION

For Trading Upside Price Movement Continuation

1.) Concept of Upside Inside Bar Break (Upside IBB)

Recommended Time Frame: Weekly (4yr 1W)

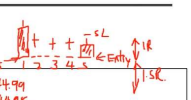

Characteristic
1.) **Prior upside** price movement followed by IB formation **(defined in the next slide)**
2.) Price action has to be **above 50sma**.
3.) Mother bar has to be one of the **3 bullish EXE.** Baby bar can be any type of bars as long as it is **within** mother bar range.

Entry Rules
4.) Within **next 3 bars** after formation of IB, there must be a **break bar (BB)** that breach the mother bar **high**. Example if the mother bar high is $45.00, long entry should be taken once **break bar** hit $45.00.

Exit Rules
5.) SL at 50% of mother bar range or low of break bar. Trader's discretion based on "tightness" of entry and SL chosen.
6.) Target projection exit based on 1.5 RR. Use find target in PAM excel to determine size and exit upside target price.

For Trading Downside Price Movement Continuation

1.) Concept of Upside Inside Bar Break (Downside IBB)

Recommended Time Frame: Weekly (4yr 1W)

Characteristic
1.) **Prior downside** price movement followed by IB formation **(defined in the next slide)**
2.) Price action has to be **below 50sma**.
3.) Mother bar has to be one of the **3 bearish EXE.** Baby bar can be any type of bars as long as it is **within** mother bar range.

Entry Rules
4.) Within **next 3 bars** after formation of IB, there must be a **break bar (BB)** that breach the mother bar **low**. Example if the mother bar low is $45.00, short entry should be taken once **break bar** hit $45.00.

Exit Rules

UPSIDE INSIDE BAR BREAK (IBB) FORMATION

Prior Upside Price Movement Definition

At least 2 bars out of prior 3 bars (preceding mother bar) that opens lower than opening price level of mother bar.

© 2021 Piranha Pte Ltd. All Rights Reserved.

UPSIDE INSIDE BAR BREAK (IBB) FORMATION

3.) Mother bar has to be one of the **3 bearish EXE**. Baby bar can be any type of bars as long as it is **within** mother bar range.

Entry Rules

4.) Within **next 3 bars** after formation of IB, there must be a **break bar (BB)** that breach the mother bar **low**. Example if the mother bar low is $45.00, short entry should be taken once **break bar** hit $45.00.

Exit Rules

5.) SL at 50% of mother bar range or high of break bar. Trader's discretion based on "tightness" of entry and SL chosen.

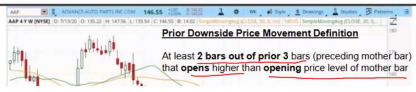

6.) Target projection exit based on 1.5 RR. Use find target in PAM excel to determine size and exit upside target price.

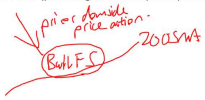

UPSIDE INSIDE BAR BREAK (IBB) FORMATION

DOWNSIDE INSIDE BAR BREAK (IBB) FORMATION

Prior Downside Price Movement Definition
At least 2 bars out of prior 3 bars (preceding mother bar)that opens higher than opening price level of mother bar

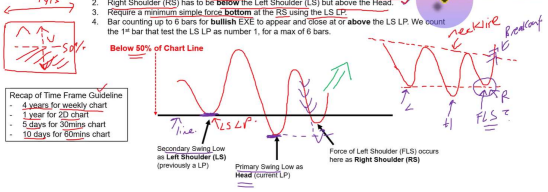

PRICE ACTION FORCE OF LEFT SHOULDER (FLS) TRADING S

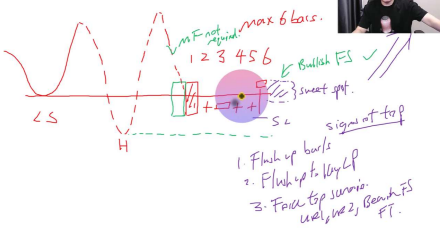

BULLISH Force of Left Shoulder (FLS) Strategy Criteria

1. Left Shoulder (LS) to form **below** 50% of the overall chart in the given time frame.
2. Right Shoulder (RS) has to be **below** the Left Shoulder (LS) but above the Head.
3. Require a minimum simple force **bottom** at the RS using the LS LP.
4. Bar counting up to 6 bars for **bullish** EXE to appear and close at or **above** the LS LP. We count the 1st bar that test the LS LP as number 1, for a max of 6 bars.

PRICE ACTION FORCE OF LEFT SHOULDER (FLS) TRADING S

BEARISH Force of Left Shoulder (FLS) Strategy Criteria

1. Left Shoulder (LS) to form **above** 50% of the overall chart in the given time frame.
2. Right Shoulder (RS) has to be **above** the Left Shoulder (LS) but **below** the Head.
3. Require a minimum simple force **top** at the RS using the LS LP.
4. Bar counting up to 6 bars for **bearish** EXE to appear and close at or **below** the LS LP. We count the 1st bar that test the LS LP as number 1, for a max of 6 bars.
