DIVERGENCE FOR CONTINUATION STRUCTURES

Convergence

The alignment of market maker nett position in the particular asset at different price points. The opposite is divergence. There is no need to check for divergence when price action is trending in no man's land.

Divergence

The immediate conflict in market maker positions in the particular asset at different price points. In a divergence scenario, there is added risk to apply UC or DC strategy. Checking for divergence only applies to continuation structures (UC/DC) types.

1.) Double top forced UC1 or UC2 Divergence

2.) Double bottom forced DC1 and DC2 Divergence
